

# CCE COORDINATION BULLETIN

**BULLETIN NUMBER 2020-1  
May 1, 2020**

## **Temporary Six (6) Month Extension of the Required On-Site, Physical Recertification of Equipment with a 3-A Symbol for 2020**

This CCE Coordination Bulletin identifies temporary, alternate procedures to be followed during the COVID-19 health crisis, in order to reduce potential disease exposure in the interest of public health for CCEs, the equipment fabricator's staff and the general public while government advisory travel restrictions are in place.

Government advisory travel restrictions may prevent the on-site, physical inspection of equipment which is required at the time of the five-year re-certification. In such case, 3-A SSI will notify the 3-A symbol holder that the deadline for completing the five (5) year on-site re-certification will be extended for up to six (6) months or through the end of 2020, whichever comes first, without a change in the anniversary date for the subsequent five (5) year re-certification.

Once the applicable government-imposed travel restrictions have been lifted that impact the ability of the CCE to travel to the location of the 3-A symbol holder's designated location for conducting the five (5) year re-certification, then this "delayed" five (5) year on-site physical re-certification assessment must be completed within sixty (60) calendar days after lifting of the applicable government advisory travel restrictions. This delayed on-site physical five (5) year re-certification for calendar year 2020 does not change the anniversary date for the subsequent five (5) year re-certification.

All other requirements found in the 3-A SSI "Manual for Third Party Verification (TPV) for 3-A Symbol Authorization and 3-A Replacement Parts and System Component Qualification Certification (RPSCQC) Programs" shall remain in effect.
